

CHANCE ART

Jimbo Bananas

I have been working on several new art projects but the one I find the most interesting is the work I am doing on the BEACH ! It has lead me to describe a new type of ART. Chance Art ! What the heck is Chance Art ? Well I studied with Lawrence Alloway back in the 1970's at SUNY Stony Brook and he opened up my mind to new forms of ART. He is famous for coining the term POP ART. I also studied with Dr. Scott at N.Y.I.T in Old Westbury who kept asking me the question " What is Art ". These wonderful professors have changed my enjoyment of life. I see the beauty around me with special lenses and appreciate every image that falls on my old but functional retinas. The human film still works ! Thank God !

Chance Art is Art that you may have a chance to enjoy if you are present at the right moment in time. There is no guarantee you will see it or enjoy it as the variables are random. The artist creates a work that is not permanent and is designed to be enjoyed for a short period during the creation and shortly after the completion. It can not be brought inside the walls of a museum to sit for eternity.

I have been painting and sculpting on the Beach and use the elements around me. They are from nature and return to nature quickly. I will publish them on this website but they will also fade into digital oblivion quickly. This form of Art is clean and eco friendly. The works often make the viewers smile. They are pleased to have been part of the " Chance Art Experience " I enjoy creating the works and also enjoy watching them return to the place from which they came. I often find people in this moment in time want to contribute to the process and I welcome their input. Children are especially open to this form of ART and jump right into the process. They are sometimes motivated to go and create their own " Chance Art ". This brings tears and smiles to my soul as it warms the heart to see them see nature's beauty.

Well I hope you have enjoyed my works and hope to see you on the BEACH !
